

DRY ICE BLASTING CLEANING SERVICES

Dry ice cleaning of fiberglass silo

Dry ice blast cleaning of a moving oven chain

Our 15 years of **dry ice blast cleaning** experience encompasses a wide variety of industries and applications that has taken us as far away as the North Slope of Alaska. This unique and highly specialized technology is often the perfect way to clean equipment such as industrial ovens and dryers, printing presses and in biologically sensitive settings such as food and pharmaceutical manufacturing processes. It is also useful in areas susceptible to water damage such as motors and other electrically sensitive areas. No blast media such as sand and powders are added to the waste stream. It is safely used on fiberglass and other relatively soft surfaces - as well as moving parts.

BENEFITS OF DRY ICE BLAST CLEANING

Green and Environmentally Friendly

- Non-hazardous, non-toxic and dry.
- No solvents or hazardous materials needed.
- No foreign blast media is introduced to the plant
- Reduces the amount waste generated for disposal.
- FDA approved for food manufacturing plants.
- Non-conductive, thus safe for motors and electrical systems.

Cost Efficient

- Saves time by cleaning in place.
- No media and grit to hinder moving parts.
- More efficient for detail level cleaning.
- Reduces disposal costs.
- Non-abrasive and non-corrosive to surfaces cleaned.
- Minimizes production downtime.
